

Light Rescue

Model LR0764

Grand Canyon National Park Flagstaff, Arizona

The 12-ft Hackney body is mounted on a Ford F550 with four-wheel drive and a 19,500 lb. GVWR. Cab features power windows and door locks and remote controlled, telescopic mirrors. A 45-amp battery conditioner is connected to the auto-eject shorepower.

The body features 7-compartments with roll-up doors. All adjustable shelf tracks are recessed into the side walls to maximize shelf storage capacity. An assortment of slide-out trays and adjustable shelves are provided to facilitate convenient equipment storage. The low maintenance, load-managed multiplexed electrical system provides power distribution to all warning lights and compartment lights. The tail lights and clearance lights are LED. A Whelen 12vdc 8" x 10" halogen scene light is provided on each side of the upper body panel. The interior compartment lights are vertical LED strip type recessed into the side walls to provide light source from top to bottom of each compartment with a minimal amperage draw.

A warning lights are Whelen LED high-intensity type for long-term durability and maximum warning output meeting NFPA1901 requirements. A Federal electronic siren and speaker round out the warning system.

Roof access is provided by three fold-down steps on each side of rear body. Chevron pattern is extended into treadplate kick panel using reflective Diamond Dots.
